Power Management Enhances Guthrie Cortland Medical Center's Sustainability Efforts with New EV Charging Solutions

Rochester, NY — January 29, 2025 — Power Management Company, an energy consulting firm and leading provider of electric vehicle (EV) charging solutions, is pleased to announce the successful installation of EV charging stations at Guthrie Cortland Medical Center in Cortland, NY. The project, completed in late 2024, features two ChargePoint CP6000 dual-port stations, delivering four parking spaces dedicated to EV and hybrid vehicles.

The newly installed charging stations are strategically positioned adjacent to the maintenance building on the east side of the hospital, with easy access to employees, patients and the local community while keeping installation costs down. With charging capacity of up to 80 amps, these dual-port stations offer up to 16.6 kW at 208VAC, ensuring fast and efficient charging compatible with all EV and hybrid models, though some models will require an adapter provided by the car manufacturer.

“Power Management is proud to partner with Guthrie Cortland Medical Center in advancing their sustainability initiatives,” said Michael Hedges, Vice President of Sales at Power Management. “This project reflects our commitment to helping organizations transition to clean energy solutions and engaging our client’s network in their sustainability goals and activities, and we’re thrilled that these stations will serve both hospital staff and the wider community.”

The addition of these charging stations not only demonstrates Power Management’s expertise in EV infrastructure but also aligns with its mission to provide cutting-edge energy solutions that drive environmental and economic benefits. As a trusted advisor, Power Management works with organizations across North America to implement comprehensive energy strategies that support long-term sustainability goals.

John Burt, CEO and Founder of Power Management, added, “Our work at Guthrie Cortland Medical Center showcases the meaningful impact that well-planned energy initiatives can have. We’re excited to continue empowering businesses and institutions to embrace cleaner, more sustainable energy options.”
